DISCRETE APPLIED MATHEMATICS
Volume 115, Numbers 1–3, 15 November 2001

Contents

N. Katoh, T. Ibaraki and A. Recski
Preface 1

D. Avis and A. Deza
On the binary solitaire cone 3

E. Boros, P.L. Hammer, F. Ricca and B. Simeone
Combinatorial problems related to origin–destination matrices 15

A. Frank, T. Jordán and Z. Szigeti
An orientation theorem with parity conditions 37

H.N. Gabow and T. Jordán
Bipartition constrained edge-splitting in directed graphs 49

I. Hiro, U. Hideyuki and Y. Mitsuo
Lengths of tours and permutations on a vertex set of a convex polygon 63

A. Kaneko
Spanning trees with constraints on the leaf degree 73

G. Károlyi and E. Welzl
Crossing-free segments and triangles in point configurations 77

K. Kashiwabara
Subdivisions of integral base polytopes 89

G.Y. Katona
A large set of non-Hamiltonian graphs 99

T. Kloks and R.B. Tan
Bandwidth and topological bandwidth of graphs with few P_4's 117

T. Koide, S. Shinmori and H. Ishii
Topological optimization with a network reliability constraint 135

K. Murota and A. Shioura
Relationship of M-/L-convex functions with discrete convex functions by Miller and Favati–Tardella 151

T. Nishizeki, J. Vygen and X. Zhou
The edge-disjoint paths problem is NP-complete for series–parallel graphs 177

N. Radics
Rigidity of multi-story buildings 187

A. Recski
Some polynomially solvable subcases of the detailed routing problem in VLSI design 199

T. Sakuma
On kernel-less clique-acyclic orientations of minimally imperfect graphs 209

Author Index 221
